Data Manipulation Language (DML) DML allows access to drawing database and enables users to create objects such as tables, text boxes, and drawing views. It is available as a COM-based add-on in the PLUGIN directory. Other DML capabilities include the ability to create the entire drawing database and the capability to read external data. DML is also available as an MDB file on AutoCAD LT. The application is available on the AutoCAD LT for Microsoft Windows platform as an autocad dmlt.mdb database. The following is an example of DML code to create a table named table1 in Drawings of the Drawing Database: # Create Table CREATE TABLE table1 (TableName nvarchar(255) NOT NULL, Title nvarchar(255) NOT NULL, Description nvarchar(255) NOT NULL, TitleOrientation nvarchar(255) NOT NULL, TextBoxOrientation nvarchar(255) NOT NULL, Locked nchar(1) NOT NULL, TitleVisibility nvarchar(255) NOT NULL, DescriptionVisibility nvarchar(255) NOT NULL, LockedVisibility nchar(1) NOT NULL, TableOrientation nvarchar(255) NOT NULL, TitleAlignment nvarchar(255) NOT NULL, TextBoxAlignment nvarchar(255) NOT NULL, LockedAlignment nchar(1) NOT NULL, TableVisibility nvarchar(255) NOT NULL, TableOutline nvarchar(255) NOT NULL, OutlineColor nvarchar(255) NOT NULL, BackgroundColor nvarchar(255) NOT NULL, TableObliqueness nvarchar(255) NOT NULL, TableRelativeWidth nvarchar(255) NOT NULL, ExtendedTableName nvarchar(255) NOT NULL); Saving Database Changes To save the changes made to a drawing database, you can use the Update command. Open Autocad and go to File > New > 3D File > .dwg (or .cad or .dxf) Get the text version of the file. It is much easier to work with than the image. Get some text editors and try some of the different text tools. After you have found the text you like best, save it into a separate file. Save this new text file into the desktop. Save it with a .txt extension. Open your AutoCAD file and go to Windows > Explorer. Select your text file. Click the Go menu and select Get info (and drag it onto the screen). Then select Properties and then Change type. Then select Show in Folder and choose the folder you saved it in. In the Save text As box, type a name and then click OK. Drag your new text file onto the AutoCAD file and type another name and click OK. Now both files have been associated. Save Autocad Save your Autocad file in the AutoCAD Templates directory. Using the API You can now access the API from a different program. Get a text editor that can talk to Python. Open your Python script and enter the commands below. First create a variable for the API. >>> import autocad >>> api = autocad.api Here are some simple operations: Note: the '-' at the end of an API means it is a command. Copy some data: >>> api.Text('15.25', 'FORM\_TEXT\_EDIT', [{'TEXT': 'Seed'}]) Move some data: >>> api.Move('15.25', '16.13', [{'TEXT': 'X+'}]) Save data: >>> api.Save('15.25') Get a shape >>> api.Solid('15.25', {'X': 10}) Look for a shape (this will return a list of all shapes that have the properties you set in the {} dictionary) >>> api.Solid('15.25', {'X': 10, 'OBJECT\_CLASS': 'CIRCLE'}) Get a table >>> api.Text('15.25', 'OBJECT', [{'TABLE': 'tables.dwg', 'VALUES':''
